

## iMaxsoft HIPAA Solution for AMISYS

The success of your business depends on how quickly and effectively it responds to changes in HIPAA regulations. Responding quickly is not enough, however; you need to know that your company is moving in the right direction. Compliance requires an information technology (IT) infrastructure that delivers solutions that meets today's HIPAA regulations while still flexible enough to enabling you to rapidly adopt future additions to HIPAA regulations.

The typical IT infrastructure is a complex mix of technology from different vendors that is difficult and costly to maintain. Your challenge is to make it all work together faster and at a lower cost. iMaxsoft's answer to this challenge is the iMaxsoft HIPAA solution, a complete software offering that helps customers implement HIPAA regulations with ease. iMaxsoft provides you with tools to make rapid enhancements to your existing HP3000 and HP9000 Amisys infrastructure without costly additions to your infrastructure.

### **iMaxsoft** HIPAA Solution for AMISYS

**iMaxsoft****Proven Solution**

20410 Town Center Lane Ste. #295  
Cupertino, CA 95014

iMaxsoft's HIPAA Solution sits on top of our proven, patent pending technology that has been *deployed by top Fortune 1000* companies occupying a variety of industries around the world. This powerful engine is designed for performance and has been used in many critical applications *for over 20 years*. Diverse applications such as airline ticketing, on-line sale, shipping logistics, automobile manufacturing, telecoms, HMOs, hospital management, among others have benefited from the iMaxsoft technology in developing best in class applications

## AMISYS 3000 and AMISYS Advance Support

iMaxsoft's HIPAA Solution supports both AMISYS 3000 and AMISYS Advance products on HP3000 & HP9000 servers. Our HIPAA Solution's rich functionalities and flexibilities can be configured dynamically to meet the sophisticated HIPAA requirements without any interruptions to your day-to-day operations.

## Industry First READ Transaction Monitoring Solution

iMaxsoft's HIPAA Solution logs both READ and WRITE ePHI activity. While WRITE transaction audit-trail monitoring has been implemented in most application, READ transaction audit-trail monitoring is rarely built into application due to performance consideration. iMaxsoft technology suffers from none of the performance issues experienced by other implementations. All transactions are logged to the relational database of your choice (SQL SERVER, ORACLE or DB2) and can be analyzed using our viewer/analyzer tool that allows you to:

- Locate potential breaches
- Identify any abnormal access
- Prevent any security violations

## Performance Guarantee

iMaxsoft's HIPAA Solution guarantees high performance to its solution. The iMaxsoft solution has minimal effect on application performance and is invisible to your end users. Past customer benchmark tests have shown that our solutions offer huge gains in business efficiency and features with *less than less 2% increase of overall performance overhead.*

## Setup and Services

iMaxsoft's HIPAA solution is easy to integrate with your environment. Generally all that required is a simple XL list change to your MPE/XL startup UDC to enable our HIPAA Solution. We will assist in the setup of your entire environment along with helping your team to create, configure and maintain your RDBMS infrastructure. If necessary iMaxsoft can also design custom solutions to the specifics to your infrastructure.

## Summary of Benefits

- Logs every single user access to ePHI (electronic Protected Health Information) and stores to each transaction to an RDBMS, giving you the flexibility to monitor ePHI access.
- Reports *when, where and how* specific users have accessed ePHI or other sensitive data.
- Prevents further breach in privacy by alerting proper corporate authorities to lockout questionable access ePHI.
- Utilizes powerful built-in RDBMS tools for enhanced browsing and reporting capabilities.
- Monitors abnormal user access to sensitive data and identifies potential breaches in privacy *before* it happens.
- Allows easy creation of reports to audit access of sensitive ePHI.
- *Seamless* integration with COGNOS, HP3000 AMISYS 3000, HP-UX AMISYS Advance, and JDBC to enable HIPAA technical safeguards without having to change any
