

DOOR – Real-time Data Replication

- Did you know that IMAGE Logging has only 3.5% maximum impact to your entire system load?
- Wouldn't it be great if you can replicate your IMAGE databases to a relational database, i.e. ORACLE, SQL SERVER or DB2 for data warehousing and web applications in real-time without developing or changing any of your HP e3000 applications?
- Wouldn't it be powerful if the replication and synchronization can be done on-line or off-line whenever you choose and you can re-sync over and over again from any check-point without impacting your production IMAGE environment?
- DOOR helps customers in replicating hundreds of IMAGE databases into one consolidated SQL SERVER for real-time web ERP.
- DOOR helps customers in replicating over 25 million transactions per day into an Eloquence database for inventory control.
- DOOR helps customers in replicating bi-directionally over one hundred country's orders from IMAGE to ORACLE in real-time mode.

DOOR – Zero Down Time DBMigration

Migrating your IMAGE database to a relational database is the first step of your migration process. Database migration isn't a one time deal, it is a repeating and an on-going process. In order to do it right, constant adjustments are required. DOOR can not only help keep your IMAGE and migrated databases in-sync at all times, but can also allow you to migrate your IMAGE database without shutting it down – we call it ZERO DOWN TIME DBMigration.

iMaxsoft

About iMaxsoft. iMaxsoft is a leading provider of legacy application migration tools and services for HP e3000, HP-UX, LINUX, WINDOWS, ORACLE, IMAGE, ALLBASE, DB2, SQL SERVER, and Eloquence. iMaxsoft bi-directional data replication and synchronization technologies enable organizations the abilities to minimize migration risk, preserve business-critical logic, and increase interoperability with open environments. Founded 1987, Cupertino, California, USA.
